LATEST PROJECTS

Vivlio - Educational Blog Platform (In Early Development)

January 2025 - Present

Website | Github

- Building an open-source platform that enables developers to share and explore technical knowledge.
- Built with Next.js 15, React 19, TypeScript, and PostgreSQL, featuring a clean UI with Tailwind CSS.
- Implemented user authentication, private/public posts, and content favoring system.
- Planned features include AI-assisted content generation, comments, tags, and search.

Haber UI - Collection Of Components Designed For AI Applications

February 2025 - Present

Website | Github

- Built haber-ui, a collection of ready-to-use React components styled with Tailwind CSS.
- Built on top of shadcn/ui, haber-ui provides additional components specifically designed for modern AI applications.

WORK EXPERIENCE

August 2023 - June 2024

Panaline- Internship Project

- Developed a financial analysis tool using Python and Streamlit
- Implemented data upload and expense allocation features

CERTIFICATIONS
